Check and update software inventory of endpoints

Comodo patch management provides software inventory and hardware details of enrolled endpoints. This inventory includes installed OS updates and third party applications. It helps to identify installed programs and their versions.

we should have latest software inventory data in order to perform efficient patch operation. Patch management server gets periodic reports of modified programmed details of endpoints.In addition to this, user can get instant software inventory data using "Refresh apps" operation .This facility enables you to match your patch operations at any time.
