

Clean up system using "system cleaner"

End points has to be cleaned periodically for fragmented files, corrupted files, junk files, temporary files and corrupted registry before they make system slow down, less secured and less efficient. It may also leads to hard disk failure.

Comodo Remote Monitoring and Management tool has built in system cleaner tool which remotely perform complete system disk cleaning and registry cleaning operations on endpoints. It helps to increase endpoint speed, hard disk performance and keep your data secured.

In RMM user can do system cleaning in following ways ,

[Run system cleaning procedure](#)

[Deploy system cleaner and clean](#)

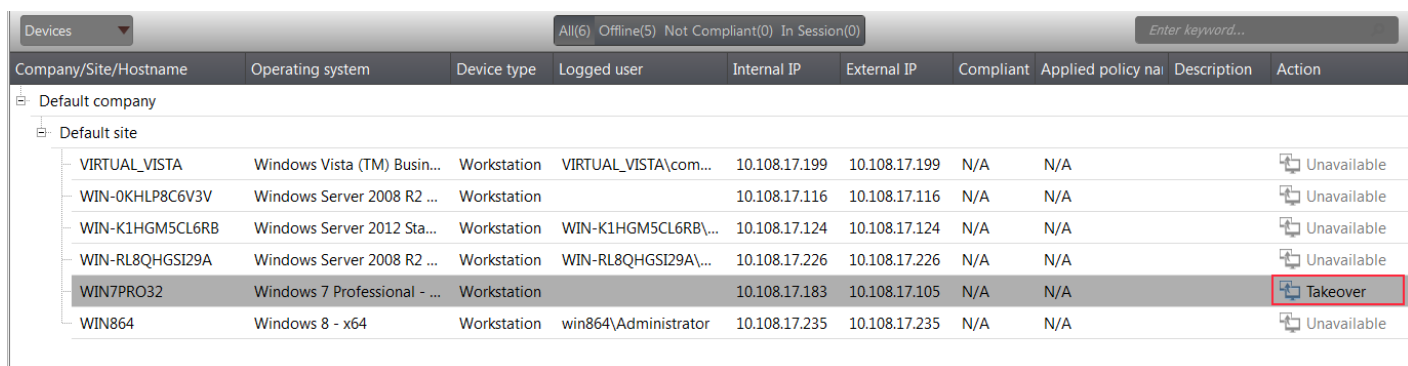

Precondition - Customer devices should have been added to RMM .

Run system cleaning procedure

1. Login into RMM

2. Establish session with endpoint

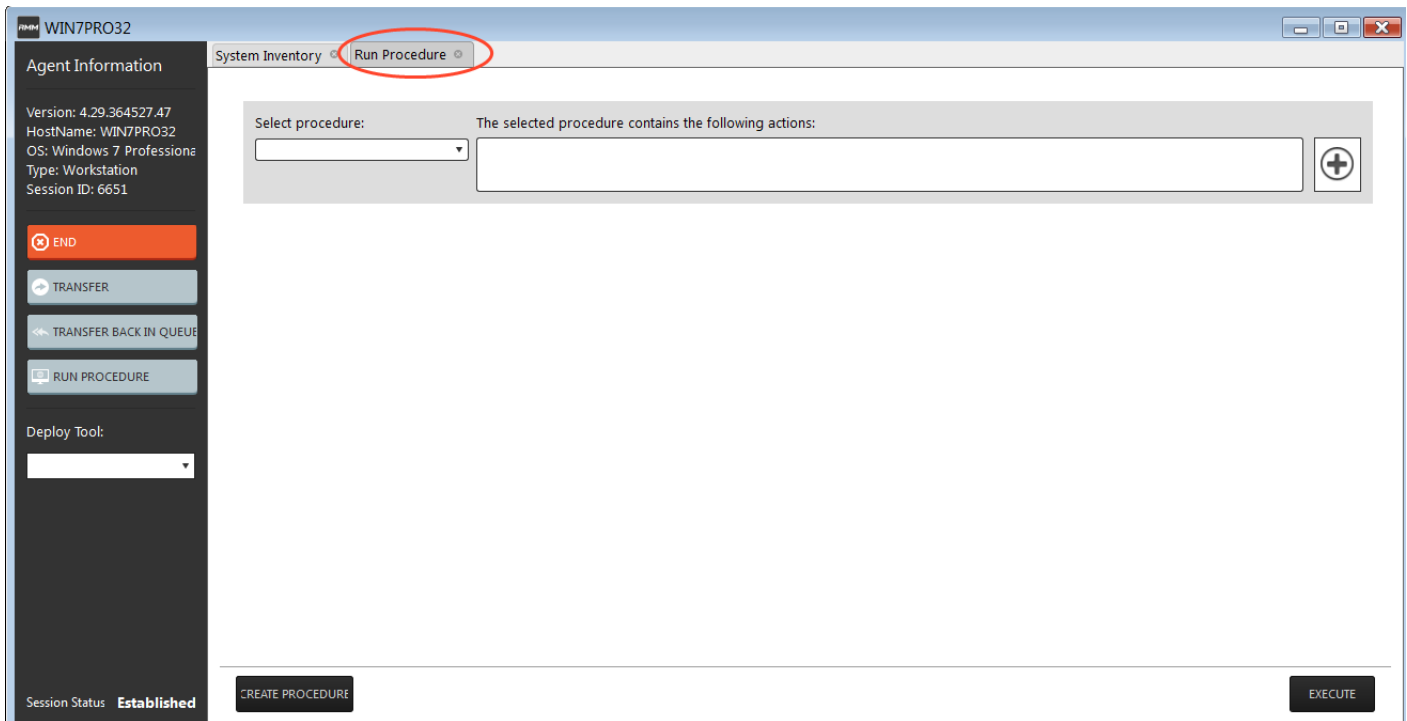

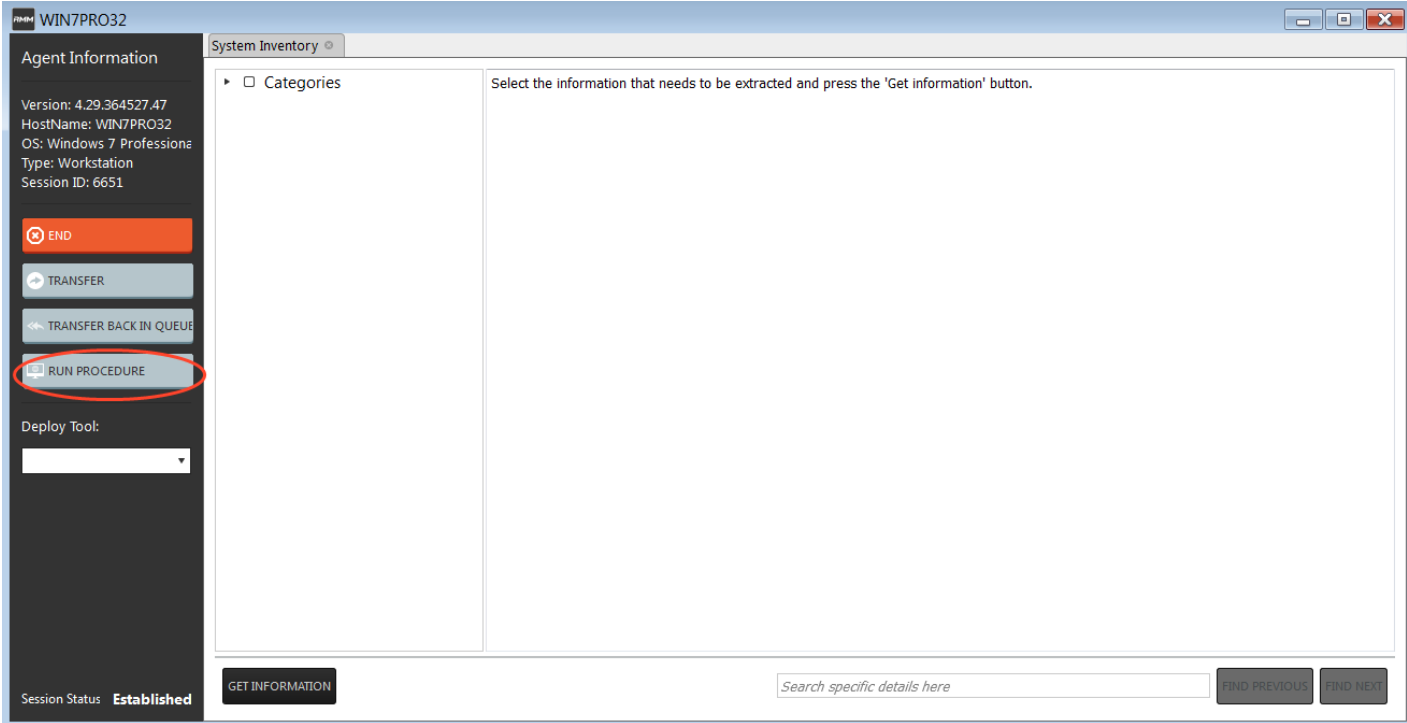

click "Takeover" button in the endpoint shown under "Devices" tab to connect remote session with customer.

Company/Site/Hostname	Operating system	Device type	Logged user	Internal IP	External IP	Compliant	Applied policy na	Description	Action
Default company									
Default site									
VIRTUAL_VISTA	Windows Vista (TM) Busin...	Workstation	VIRTUAL_VISTA\com...	10.108.17.199	10.108.17.199	N/A	N/A		Unavailable
WIN-0KHLP8C6V3V	Windows Server 2008 R2 ...	Workstation		10.108.17.116	10.108.17.116	N/A	N/A		Unavailable
