## About This Release

We are happy to announce our new release. This release provides some features, improvements and fixes. This document communicates all of these major changes in our cloud antispam, Dome Antispam MSP.

### Features

- Spam filter monitoring about different filtering sources is implemented in background monitoring process.
- Spam filter comparison of different filtering sources is added for detecting better filtering sources in background comparison process.

### Improvements

- Utilizing statistical, human based spam detection control API to Comodo Central Threat Lab.
- Improving performance of signature, rules delivery process to all our clients.

### Fixes

- Bugfix in internal verdict system for some verdicts such as temp, error, virus, header etc. which cause unwanted message rejection.
- Bugfix about delivery queue alerts settings which are not shown on the audit log.
- Bugfix about creating additional copied emails in internal message queue processing while getting processing error.
- Bugfix in Comodo RBL Pass Messages with Blacklisted IP in order to be set quarantine option.
- Bugfix in archive quota usage pie chart presentation which is not updated after deleting any messages from archive.
- Bugfix about the the route configuration when the SMTP port value is absent in the MTA PG configuration case.
