ITarian

IT Operating Platform

July Release Notes

Table of Contents

Introduction

This document contains notes about the ITarian & Comodo ONE & Comodo Dragon Platforms June 2020 release. The release schedule will be as follows:

US Region -> The release will start on 15th July 2020 Wednesday at 1 AM EDT

EU Region -> The release will start on 16th July 2020 Thursday at 5 AM GMT

The release is expected to take 30 minutes to deploy, during that time the platform will be under maintenance mode, where you may observe minor glitches. If you observe any issues, please feel free to share with us.

Endpoint Manager

Endpoint Manager Core

New Features

- **Payment Notification Differentiation According to Roles**

   From now on, only users with administrator roles will see notifications about payment issues. Users with a "User" role will not see any notifications about invoices or payment.

- **User Action Logs**

   All user actions will be listed on the "Audit Logs" page.

   - Create New User

   - Send Password Recovery Email

   - User Rename

   - User Import

   - User Delete

- Create New User Group

- User Group Rename

- User Group Delete

- Add Users to Group

- Remove Users to Group

- Export to CSV (User List)

- Export to CSV (User Group List)

Here is the wiki of this feature.

- **Wi-Fi Network Restriction for iOS Devices**

iOS devices can be forced to use only allowed Wi-Fi networks.

Here is the wiki of this feature.

Bug Fixes

- Fixed the issue of ITSMService.exe not starting automatically after endpoint running Windows 7 gets restarted.
- Fixed the issue of the filtering company/group not working in the "Global Software Inventory" section.

Security

New Features

- Ability to change VD Background - (Windows profile (CCS rebranding): Ability to change VD Background)

Here is the wiki of this feature.

- Access Scope Role shows Containment items from Other companies: Containment logs page: Implement Device Tree

Bug Fixes

- Fixed the issue of device tree filters being reset when navigating between tabs in the "Security Dashboard" section.

Remote Monitoring and Management

New Features

- **Disk Monitors**

Disk monitoring functionalities are extended with the below conditions:

- Disk Utilization

- Free space left on any disk

[Here](#) is the wiki of this feature.

Bug Fixes

- Fixed the issue of a predefined script procedure named as "Uninstall and reinstall Communication Client" is outdated and not working as expected.

Patch Management

New Features

- **Windows Third-Party Application Patching Support Improvements**

Windows Third Party Patch Management system now also checks the applications installed in "C:\Users\{user}\AppData\" folder in addition to "C:\Program Files\". From now on, you will be able to find and manage more third-party patches for your devices.

[Here](#) is the wiki of this feature.

- **Vulnerability Management Widgets in Dashboard**

We introduce 2 new dashboard widgets for Common Vulnerabilities and Exposures. From now on, you will be able track vulnerabilities from the Dashboard->Compliance page.

- Top 5 Vulnerable Devices by Vulnerability Count

- Top 5 Vulnerabilities by Device Count

[Here](#) is the wiki of this feature.

- **Endpoint Patching Status Widget in Dashboard**

We now have the Endpoint Patching Status Widget added under Dashboard->Compliance. You will be able to easily track operating system patching statuses for your devices from this widget.

[Here](#) is the wiki of this feature.

Remote Control

Bug Fixes

- Fixed the issue of ''able to remote into servers where RC is turned off''
- Fixed the issue of ''mouse pointer is not visible when try to perform remote control''
