## About This Release

We are happy to announce global availability of Dome Firewall Virtual Appliance 2.5.0 and Central Manager 1.3.0. This release provides several improvements and various fixes. This document communicates all the major changes in Dome Firewall 2.5.0 and Central Manager 1.3.0

## Compatible Products

All previous versions are updated to 2.5.0 and 1.3.0 without any issues or service interruptions.

## Improvements

- Virtual IP / DNAT Update: Previously Dome Firewall used to deliver DNAT via Virtual IP feature. Additional SNAT selection was making it harder to comprehend hence Dome Firewall 2.5.0 introduces DNAT Page by replacing Virtual IP. DNAT still provides the same NAT capabilities and more but via a UI similar to SNAT hence easier to comprehend and use.
- Virtual IP View is removed from versions 2.5.0 and higher.
- Central Manager can be used for creating DNAT rules in remote Dome Firewall Virtual Appliances with 2.5.0
- Dome Firewall and Central Manager now supports VMware with a new OVA.
- Improvements in Site-to-site and Client-to-Site VPN Services

## Fixes

- Stabilization
- Instability with the addition of new URL filtering rules is handled.
- Default option for "service" and "protocol" drop-downs are set to be "any".
- Instability with enabling/disabling DNAT rules is handled.
